

# Getting Started: 1Password for Partnerships teams

**Store partnership details, shared logins, and notes securely with 1Password.**

*Relationships are the currency of partnerships, and they leave a long paper trail. Contracts, meeting notes, contact information ... wouldn't it be nice to have somewhere to put it all without worrying about security or privacy?*

**With 1Password, you can securely store and share documents, login credentials, secure notes, even contact identities and membership details.** And with shared vaults and granular permission settings, you can ensure everyone only has access to the things they need.

**Partnership teams use 1Password to:**

- Share login credentials for affiliate programs and portals
- Store and share contracts and other sensitive documents
- Document and share partnership details with Secure Notes
- Store contact information as identities
- Monitor the whole team's access with Advanced Protection

“

*We absolutely love using 1Password as it not only makes things more secure, but also helps streamline our workflow.*
